# Making a Quiz
## Task: Code a quiz to test on your friends!

Drag these blocks into Scratch and order them in a sequence to create a quiz.

Add a new background and your sprite question master.

Create a score variable. Remember to code this so it is set to zero at the start each time.

Create the code to allow your sprite to ask questions. Then use the if-then blocks to decide what happens once these have been answered. Remember to use duplicate once you have successfully coded one question and answer code to help save time.

HINT

Finish by adding an ending, with the if-then-else block so the user knows how they did.
