How to make a Zoetrope

You will need:
- Sheet Template
- Card
- Blue tack
- Glue
- Stick/ pencil
- Scissors

Step 1- Cut out one of the templates. If you choose the pre-designed one you can skip step 2.

Step 2- Draw your images on the template. Each one must be in the circle and in a slightly different position from the last.
See the example below.

Step 3- Fold along the dotted line and glue the two sides together.

Step 4- Cut out the shaded rectangles. These will be the parts you view the images from.

Step 5- Connect the two sides of the paper together to make a circle. Make sure your pictures are on the inside.

Step 6- Cut a large circle from your card and make a hole in the middle with a pencil.

Step 7- Stick your zoetrope picture circle to the card.

Step 8- Push your pencil/ stick through the hole and secure it with tape on either side.

Step 9- Look through the gaps and spin the pencil/ stick in your hands and watch the pictures move!
